# Validating the Supply Chain

October 2021

**iab.**  
TECH LAB

# Agenda

- IAB Tech Lab Introduction
- *ads.txt* & Sell side Supply Chain Standards
- Why validation was needed
- What Tech Lab developed
- Key Takeaways & Action Items

# Our Mission

Neutral, member-driven organization:  
*750+ companies | 20+ working groups*  
*3000+ participants | 40+ countries*

Shared resources  
& benefits

Engage a **global member community** to **develop foundational** technology and standards that enable growth and **trust** in the digital media ecosystem.

Interoperable,  
efficient base  
for innovation

"Trust by verify" – standards enable  
transparency in the supply chain

# Tech Lab Sell Side Transparency standards

## **ads.txt / app-ads.txt**

Lists authorized sellers (IDs) of a publisher's / app developer's ad inventory

## **SupplyChain Object**

Lists all sellers by business domain & seller ID that are paid for selling an OpenRTB impression

## **sellers.json**

Reveals seller identities based on publisher or seller IDs in:

- 1) OpenRTB Publisher object
- 2) ads.txt files
- 3) OpenRTB SupplyChain object

## **ads.cert (public comment)**

Validates that bid request contents are not manipulated as impressions pass among supply chain entities. (Cryptographically signs bid requests using public & private keys.)

## **How it all works together:**

- **ads.txt/app-ads.txt** identifies who is authorized to sell inventory (but not who they are).
  - **SupplyChain** reveals all intermediaries involved with the payment flow...
    - ...and enables buyers to enforce **ads.txt** for all intermediaries.
  - **sellers.json** provides business names of the otherwise opaque IDs.

# Sellers.json

## Goal

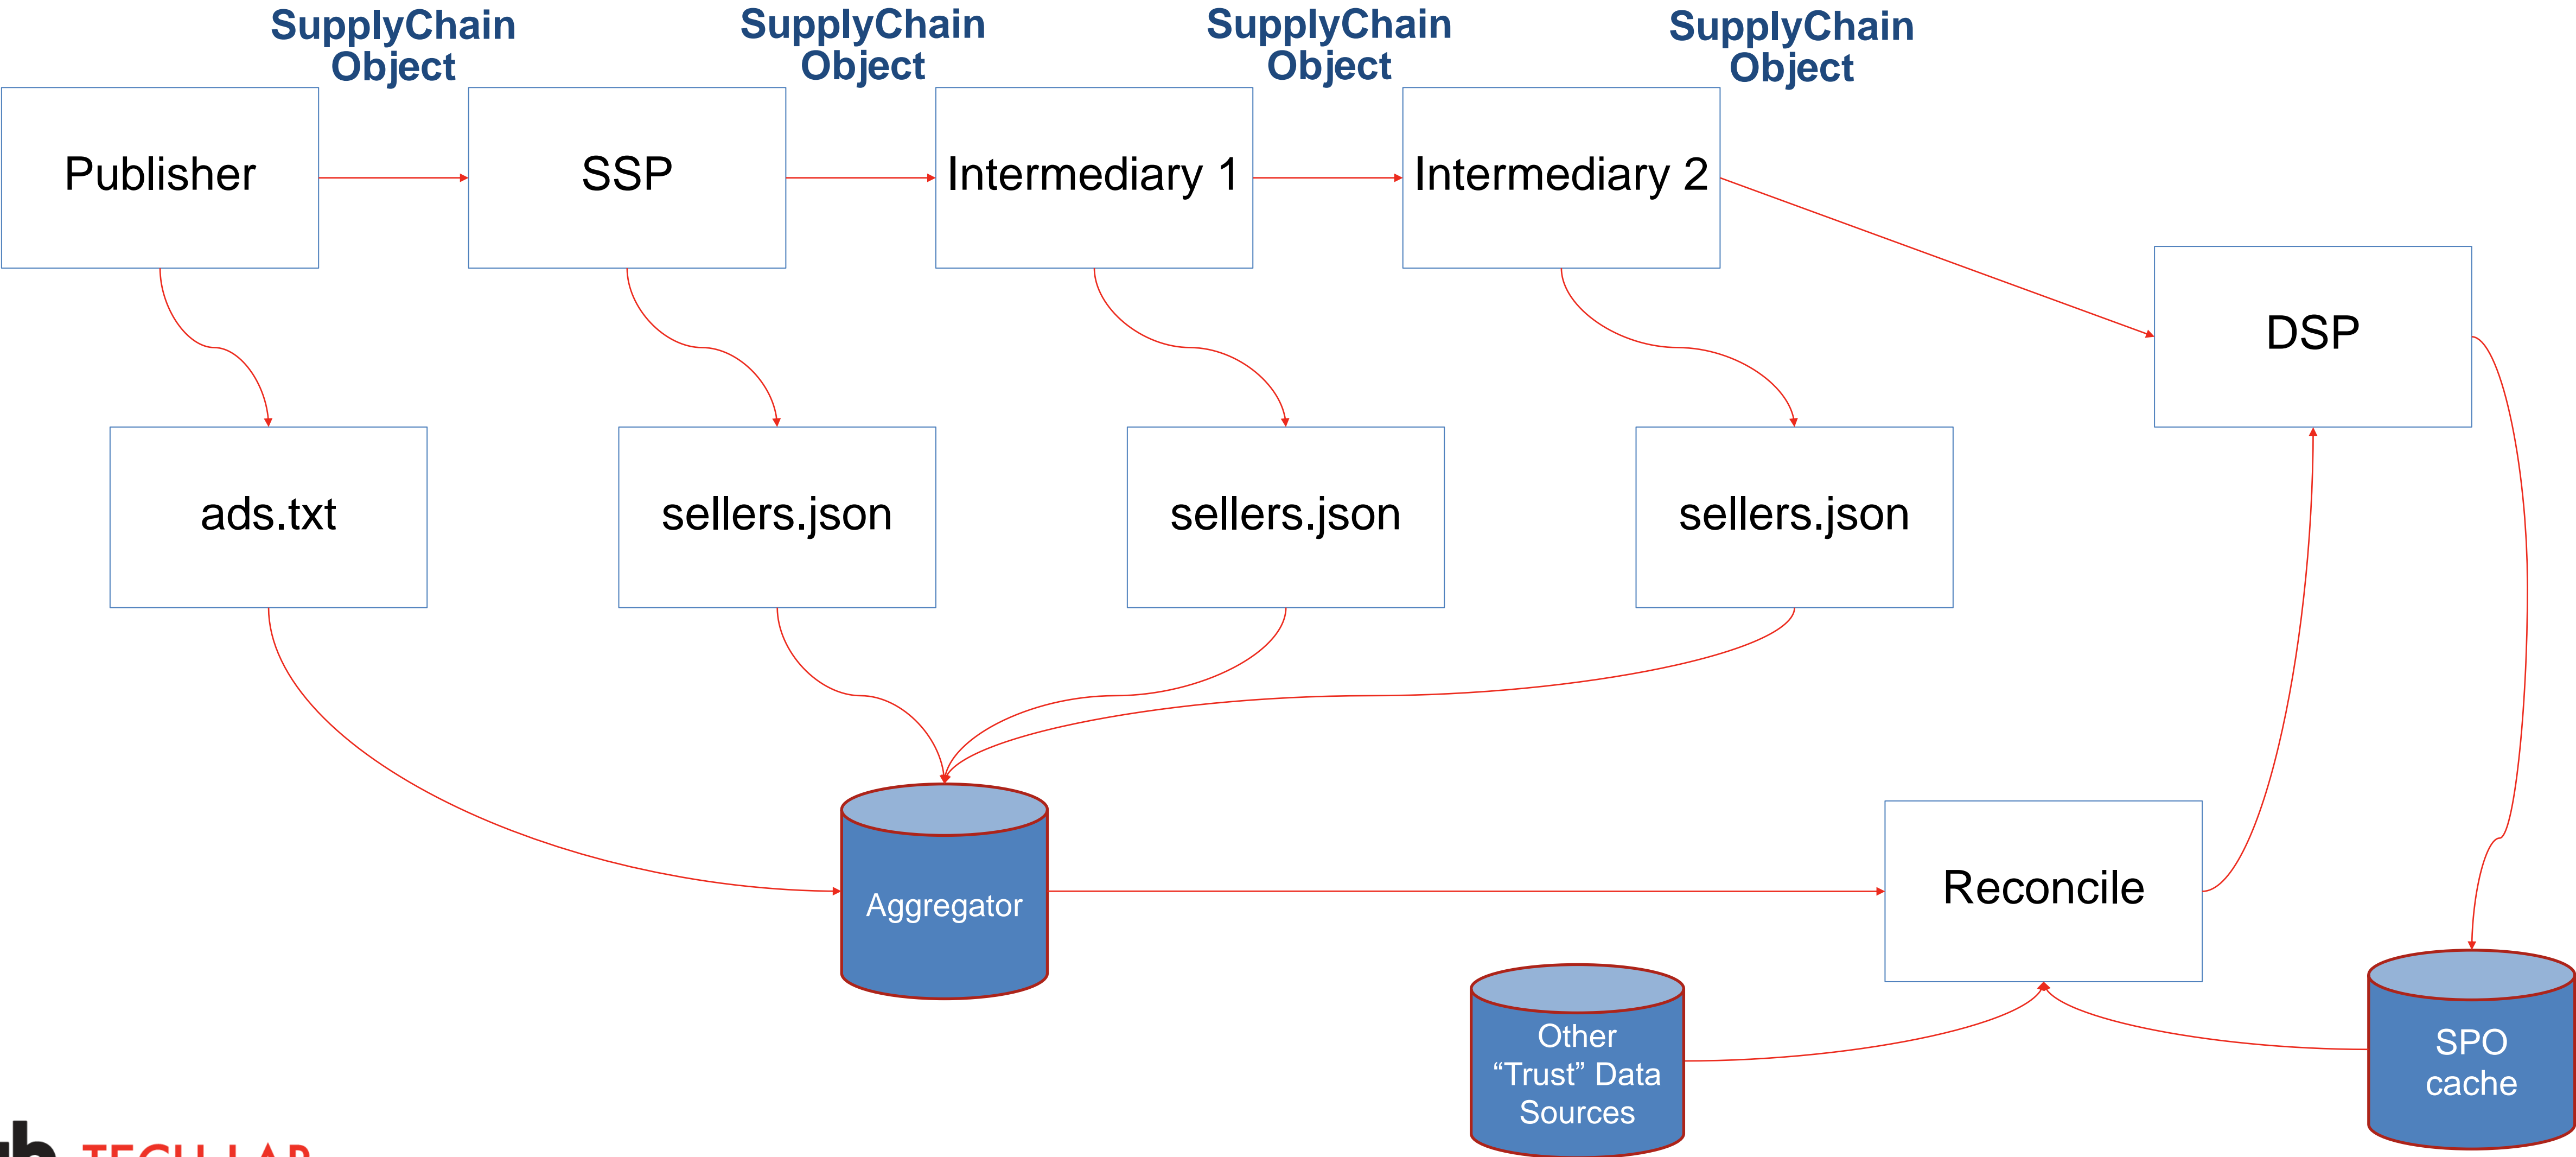

- **Provides business identity information (name/domain) for sellers (publishers and intermediaries).**

## Standard

- **JSON file posted by ad tech companies (SSPs, Ad Networks, Exchanges)**
- **Covers publisher and seller ids used in:**
  - OpenRTB Publisher object
  - Ads.txt/app-ads.txt files
  - OpenRTB SupplyChain object
- **Launched July 2018**
- **Coverage : Gaining momentum (~350?)**

```
exchange1.com/sellers.json:

# The Challenge: Validating Your Authorized Sellers

**Buying platforms use the output produced by these standards (ads/app-ads.txt, sellers.json) in real time bidding systems**

- **Incorrect or missing entries can mean missed revenue or opportunity for unauthorized sale of inventory**
- **Publishers need to be aware of how selling partners are representing them in their sellers.json files**

# What Tech Lab Built

## **SUPPLY CHAIN VALIDATION** **New Automated Service for Publishers**

### The Solution: Regular Automated Validation

As part of IAB Tech Lab's Transparency Center initiative, we've developed a new service: Supply Chain Validation. This service will not just verify that your ads.txt and/or app-ads.txt file adheres to the technical specifications, but will also alert you to inconsistencies between your file and the sellers.json file. You'll be able to check one place to see how your selling partners are representing the relationship.

This validation service offers the following benefits:

- Weekly validation of ads.txt and app-ads.txt files against sellers.json with a standard set of test cases
- Email notifications alerting you to inconsistencies or areas that need further investigation
- Publication of validated results to help buyers gain confidence in authorized supply paths

# Supply Chain Validation – the basics

- **Over 20 programmatic test cases, checking an ads.txt entry against the referenced advertising system's sellers.json file**
- **Notifications are bucketed into either errors or alerts**
  - **Errors** - this status will be used to indicate that a test case has failed, the results do not match the published specifications. (examples, ads.txt file doesn't exist, doesn't have at least one valid entry, publisher lists RESELLER, sellers.json lists PUBLISHER)
  - **Alerts** - this status will be used when IAB Tech Lab is unable to fully programmatically validate the results. The specifications are designed in such a way that it will be common for an authorized seller entry to include Alert notifications. Alerts will highlight cases that may need manual review. (Example: sellers.json domain)

# How it's helped Interplay Media

# Key Takeaways & Actions

- **If you are an owner of an ads.txt/app-ads.txt or sellers.json file, ensure you have a way to update it regularly by:**
  - **Removing out of use entries**
  - **Adding new entries**
  - **Updating entries as entities change names**
- **If you are a publisher and want help with this process, sign up for IAB Tech Lab's Supply Chain Validation tool.**
- **If you are a seller and want to review your publisher partner's files in bulk checkout IAB Tech Lab's Transparency Center APIs.**
- **If you are a buyer and want to better understand IAB Tech Lab's notification codes for ads.txt entries, check out the Transparency Center to learn more.**
